Assignment 7

Michelle

4/28/2020

#First get packages we need

```
install.packages("yearn")
install.packages("OUwie")
install.packages("nloptr")
install.packages("lattice")
install.packages("phytools")
```

```
library(ape)
library(geiger)
```

```
## Registered S3 method overwritten by 'geiger':
##   method            from
##   unique.multiPhylo ape
```

```
library(OUwie)
```

```
## Loading required package: nloptr
```

```
## Loading required package: lattice
```

```
## Registered S3 method overwritten by 'phytools':
##   method      from
##   logLik.gfit geiger
```

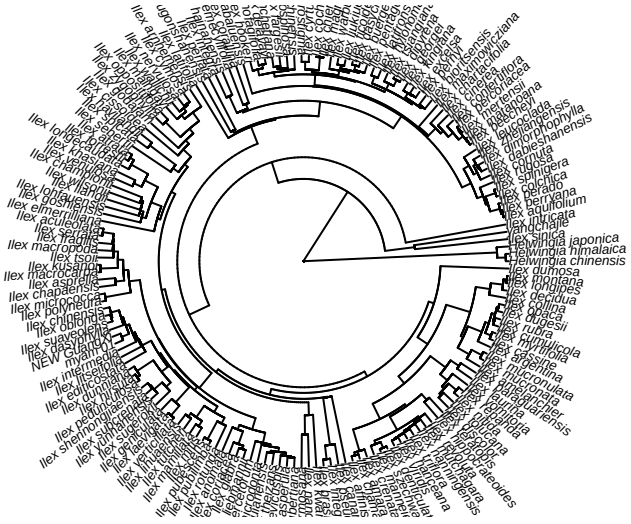
```
library(nloptr)
library(lattice)
library (corHMM)
```

```
## Loading required package: GenSA
```

```
library(phangorn)
library(openxlsx)
library(rotl)
library(phytools)
```

```
## Loading required package: maps
```

```
hollies <- get_study_tree("ot_1984", "tree1")
hollies.study.metadat<-get_study_meta("ot_1984")
hollies.tree.ids<-get_tree_ids(hollies.study.metadat)
plot(hollies, type="fan", cex = 0.4)
```

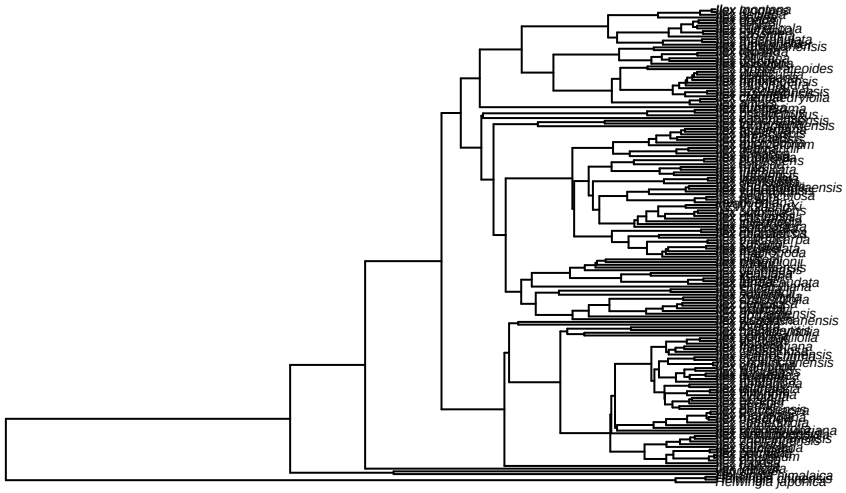


#Now get the tree and data. For these exercises, knowing uncertainty in your measurements can also be important. #(remember for homework to change eval=FALSE to eval=TRUE).

```
hollies <- get_study_tree("ot_1984", "tree1")
print (hollies)
```

```
##
## Phylogenetic tree with 175 tips and 174 internal nodes.
##
## Tip labels:
##  Helwingia_chinensis, Helwingia_himalaica, Helwingia_japonica, Ilex_sinica, yangchajie, Ilex_intrica
##
## Rooted; includes branch lengths.
```

```
hollies.study.metadat<-get_study_meta("ot_1984")
hollies.tree.ids<-get_tree_ids(hollies.study.metadat)
plot(hollies, cex = 0.4)
```



```
